

Project Initialization and Planning Phase

Date	27 june 2026
Team ID	
Project Name	HDI Prediction System using Machine Learning and Flask
Maximum Marks	3 Marks

Define Problem Statements

The purpose of this problem statement is to understand the challenges faced by government organizations, researchers, and policymakers in measuring and predicting the Human Development Index (HDI). It helps the team identify the factors influencing HDI, understand the need for accurate prediction, and develop a machine learning-based solution. By analyzing socio-economic indicators, the HDI Prediction System provides reliable predictions that support data-driven planning and policy decisions.

Objectives:

To develop a machine learning-based Human Development Index (HDI) prediction system.

To predict the HDI of a country using socio-economic indicators.

To assist governments and researchers in analyzing human development trends.

To improve decision-making through accurate data-driven predictions.

To provide a simple, user-friendly web application using Flask.

To support better policy planning for education, healthcare, and economic development.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government analyst, researcher, or policymaker who wants to evaluate a country's Human Development Index (HDI).	Predict the Human Development Index using socio-economic indicators such as life expectancy, education, and income.	I do not have an accurate and efficient way to predict HDI using multiple development indicators.	HDI depends on several interconnected socio-economic factors that are difficult to analyze manually and require data-	Uncertain about making informed policy decisions and concerned about the accuracy of development planning.

				driven prediction techniques.
