

Data Flow Diagram

Date	27 june 2026
Team ID	
Project Name	HDI Prediction System using Machine Learning and Flask
Maximum Marks	2 Marks

Data Flow Diagram

The Data Flow Diagram (DFD) illustrates how data flows through the HDI Prediction System. It shows the interaction between users, the prediction system, machine learning model, and database to generate accurate HDI predictions and reports.

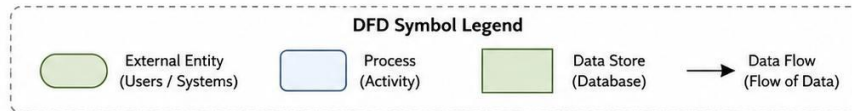

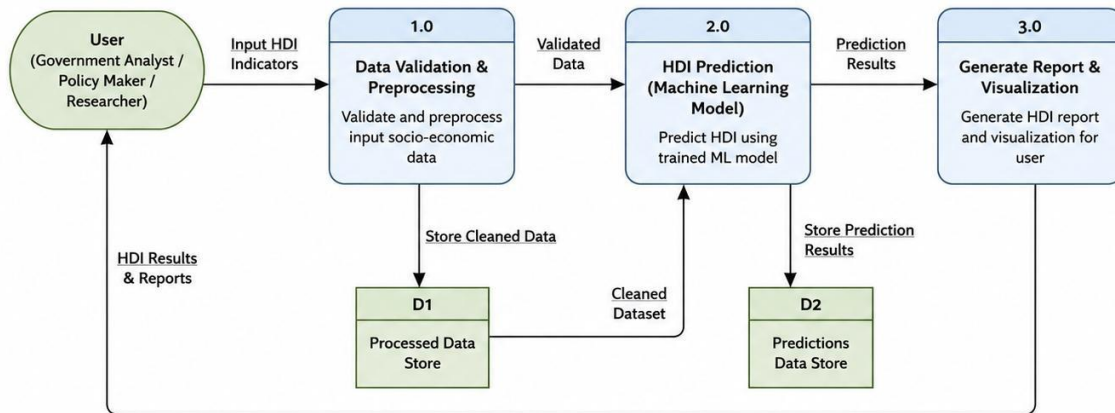

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

Data Flow Diagram (DFD) – HDI Prediction System

Data Flow Description

- User provides socio-economic indicators related to HDI.
- System validates and preprocesses the data.
- Cleaned data is used by the ML model to predict HDI.
- Prediction results are stored and used to generate reports and visualizations.
- Final HDI results and reports are sent back to the user.

External Entities

- User – Government Analyst / Policy Maker / Researcher

Data Stores

- D1 – Processed Data Store
- D2 – Predictions Data Store
