

No. of Functional Features Included in the Solution

Date	5 july 2026
Team ID	
Project Name	HDI Prediction System using Machine Learning and Flask
Maximum Marks	5 Marks

Functional Features Overview:

The HDI Prediction System provides essential features to collect user input, preprocess data, and accurately predict the Human Development Index using a trained machine learning model. The system includes a simple web interface for entering socio-economic indicators, validates user inputs, processes the data, generates predictions, and displays the results. These features work together to provide an efficient, accurate, and user-friendly prediction system.

S.No	Feature Name	Feature Description	Module / Component	Status (Done / In Progress / Pending)	Marks Contribution
1	User Input	Accepts HDI indicator values from the user	Frontend	Done	High
2	Data Preprocessing	Cleans and prepares input data	Data Processing	Done	High
3	HDI Prediction	Predicts HDI using the trained ML model	ML Model	Done	High
4	Result Display	Displays predicted HDI to the user	Frontend	Done	Medium
5	Model Loading	Loads trained model at runtime	Backend	Done	Medium
6	Error Handling	Validates inputs and handles errors	Backend	Done	Medium
7	Dataset Management	Reads dataset for training/testing	Database	Done	Low
8	GitHub Repository	Stores source code with version control	GitHub	Done	Low

Feature Summary:

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	8
Core / Must-Have Features	5

Additional / Nice-to-Have Features	3
Features Tested & Verified	8

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	2	User input form, Result page
2	Backend / Logic	3	Prediction, Validation, Model loading
3	Database / Storage	1	Dataset storage
4	API / Integration	1	Flask application
5	Security / Authentication	1	Input validation
